

SECTION 4: COUNTY PROFILE

Profile information is presented and analyzed to develop an understanding of a study area, including the economic, structural, and population assets at risk and the particular concerns that may be present related to hazards analyzed later in this plan (e.g., low lying areas prone to flooding or a high percentage of vulnerable persons in an area). This profile describes the general information of the County (physical setting, population and demographics, general building stock, and land use and population trends) and critical facilities located within Onondaga County.

GENERAL INFORMATION

Onondaga County was established in 1794 and is comprised of separate municipalities, which include one city, 19 towns and 15 villages. The Onondaga Indian Reservation is also located in the County, near the towns of Onondaga and LaFayette. The County is located within 350 miles of all major cities in the Northeast U.S and had an estimated 2007 population of 454,010 (Onondaga County, Date Unknown; U.S. Census, 2009). According to the U.S Census Bureau, Onondaga County is the 11th most populated county in New York State (U.S. Census, 2007).

Physical Setting

This section presents the physical setting of the County, including: location, hydrography and hydrology, climate, and land use/land cover.

Location

Onondaga County is located in Central New York State, on the eastern side of the Finger Lake Region. The County is bordered by Cayuga County to the west, Oswego County to the north, Madison County to the east and Cortland County to the south. The County extends approximately 30 miles north and south, and 35 miles east and west, with a total area of about 806 square miles. The only city, Syracuse, is located in the center of the County with one of the five lakes, Onondaga Lake, in its north western corner. Several major highways run through Onondaga County, including Interstates 81, 90, 481 and 690, and U.S. Route 20. All are major roadways within New York State (Onondaga County, Date Unknown).

Hydrography and Hydrology

The major rivers of Onondaga County include the Seneca River and the Oneida River. The Seneca River is a large river that drains an area of approximately 5,567 square miles of central New York State. It is part of the New York State Barge Canal System and part of the original Erie Canal System. In the Village of Phoenix, the River combines with the Oneida and Oswego River and flows north into Lake Ontario (Canoe Cayuga County, Date Unknown).

The land area of the County drains into two major river basins, which contain four watersheds. A river basin is the portion of land drained by a river and its tributaries. It encompasses the entire land surface divided and drained by many streams and creeks that flow downhill into each other and eventually into one river. The final destination is either an estuary or an ocean. A river basin sends all the water falling on the surrounding land into a central river and eventually out to sea (Office of Environmental Education, Date Unknown).

A watershed is the area of land that catches rain and snow and drains or seeps into a marsh, stream, river, lake or groundwater. Watersheds come in all different shapes and sizes, with some covering millions of square miles while others cover only a few acres. They cross county, state and international boundaries (EPA, 2009; Conservation Technology Information Center, Date Unknown).

Both river basins and watersheds are areas of land that drain to a particular waterbody, such as a lake, stream, river or estuary. In a river basin, all water drains into a large river. The term watershed is used to describe a smaller area of land that drains to a smaller stream, lake or wetland. There are smaller watersheds within a river basin.

Oswego River Basin

Most of Onondaga County falls within the Oswego River basin (Figure 4-1). The Oswego River Basin is located in central New York State and contains a diverse system of streams, lakes, and canals. It has an area of 5,100 square miles and encompasses three physiographic provinces – the Appalachian Plateau, the Tug Hill Plateau, and the Lake Ontario Plain (USGS, 2002). This basin is one of the largest in New York State. The drainage area of the Oswego River basin includes all of Seneca County; most of Onondaga, Cayuga, Tompkins, Schuyler, Yates and Ontario Counties; large portions of Oswego, Oneida, Madison and Wayne Counties; and smaller parts of Lewis, Cortland, Chemung, Steuben and Livingston Counties (NYSDEC, 2007). Many waterbodies and tributaries fall within the Oswego River Basin including, but not limited to, the Oswego River; the Oneida Lake, Oneida River, Butternut Creek, Limestone Creek; and the Onondaga Lake, Skaneateles Lake, Otisco Lake, Onondaga Creek, Nine Mile Creek, Ley Creek, Bloody Brook, Harbor Brook, Skaneateles Creek, and the Seneca River (NYSDEC, 2007).

Figure 4-1. Oswego River Basin

Source: Musser, 2007

Within the Oswego River basin, three watersheds are found in Onondaga County: Seneca River, Oneida River and Oswego River.

Seneca River Watershed

The Seneca River watershed has a total of 4,497 miles of streams and a drainage area of 3,437 square miles. This watershed is found in 14 New York State counties, which include: Cayuga, Chemung, Cortland, Livingston, Monroe, Onondaga, Ontario, Schuyler, Seneca, Steuben, Tioga, Tompkins, Wayne, and Yates (NYSDEC, 1998; EPA, 2009). The Seneca River is located in central New York State and flows west to east from Seneca Lake. It is part of the New York State Barge Canal System and part of the original Erie Canal System. The River stretches from Geneva in Ontario County to Phoenix in Oswego County, where its waters combine with the Oneida and Oswego Rivers that flow into Lake Ontario (Cayuga County, Date Unknown). This river traverses west to east within the northern portion of Onondaga County.

The Onondaga Lake watershed of the Seneca River watershed covers 285 square miles located almost entirely within Onondaga County (Figure 4-2). The major natural tributaries to the lake are Onondaga Creek and Nine Mile Creek, which together account for approximately 70-percent of the total amount of water that flows into Onondaga Lake each year. Other natural tributaries include Ley Creek, Harbor Brook, Saw Mill Creek and Bloody Brook (Onondaga Lake Partnership [OLP], Date Unknown).

Figure 4-2. Onondaga Lake Watershed

Source: OLP, Date Unknown

Oneida River Watershed

The Oneida River watershed has a total of 1,772 miles of streams and a drainage area of 1,489 square miles. This watershed is found in six New York State counties, which include: Cortland, Lewis, Madison, Oneida, Onondaga, and Oswego (NYSDEC, 1998; EPA, 2009). The Oneida River is located in central New York State and flows from Oneida Lake to its confluence with the Seneca and Oswego Rivers. The Oswego River eventually empties into Lake Ontario. This river traverses within the northeastern section of Onondaga County.

Oswego River Watershed

The Oswego River watershed has a total of 177 miles of streams and a drainage area of 132 square miles. This watershed is found in three New York State counties, which include: Cayuga, Onondaga, and Oswego (NYSDEC, 1998; EPA, 2009).

Susquehanna River Basin

The Susquehanna River basin drains a total of 27,510 square miles. It covers half of Pennsylvania and portions of New York State and Maryland. In total, it includes all or portions of 67 counties in these three states. Within the Susquehanna River basin, there are six major subbasins (Figure 4-3). This basin has more than 49,000 miles of waterways (Susquehanna River Basin Commission, 2006).

Figure 4-3. Location of the Upper Susquehanna River Basin

Source: Susquehanna River Basin Commission, 2006

Within the Susquehanna River basin, one watershed is found in Onondaga County: Chenango.

Chenango Watershed

The Chenango Watershed has a total of 1,912 miles of streams and a drainage area of 1,581 square miles. This watershed is found throughout eight New York State counties, which include: Broome, Cayuga, Chenango, Cortland, Madison, Oneida, Onondaga, and Tioga (NYSDEC, 1998; EPA, 2009).

Climate

The climate of New York State is very similar to most of the Northeast U.S. and is classified as Humid Continental. Differences in latitude, character of topography, and proximity to large bodies of water all have an effect on the climate across New York State. Precipitation during the warm, growing season (April through September) is characterized by convective storms that generally form in advance of an eastward moving cold front or during periods of local atmospheric instability. Occasionally, tropical cyclones will move up from southern coastal areas and produce large quantities of rain. Both types of storms typically are characterized by relatively short periods of intense precipitation that produce large amounts of surface runoff and little recharge (Cornell, Date Unknown).

The cool season (October through March) is characterized by large, low-pressure systems that move northeastward along the Atlantic coast or the western side of the Appalachian Mountains. Storms that form in these systems are characterized by long periods of steady precipitation in the form of rain, snow,

or ice, and tend to produce less surface runoff and more recharge than the summer storms because they have a longer duration and occasionally result in snowmelt (Cornell, Date Unknown).

Onondaga County generally experiences seasonable weather patterns characteristic of the northeastern U.S. Cyclonic systems and cold air masses affect the County's weather, making winters cold with snow. During the summer and parts of spring and autumn, temperatures rise during the daytime and fall rapidly after sunset. Summer temperatures typically range from about 76°F to 81°F (Fahrenheit). Winter high temperatures are usually in the middle to upper 30s°F, with minimum temperatures of 14°F expected. Overall, the average high temperature for the County is approximately 57°F and the average low temperature is approximately 37°F. Snow accumulates to an average depth of 121 inches each year (Greater Syracuse Economic Growth Council Resource Center, Date Unknown).

Land Use and Land Cover

Land use in Onondaga County is influenced by natural resources, topographic constraints, water lines, sewers, and roads. The County has a relatively compact development pattern and is made up of rural, suburban and urban areas (Syracuse-Onondaga County Planning Agency, 1998). Land development has followed a pattern of decentralization that has existed for the past several decades, leading to expansion in the suburban areas and mixed pattern of stability, decline, and redevelopment in Syracuse (Syracuse-Onondaga County Planning Agency, 1998).

The urbanized area in the County is mainly found in Syracuse and extends outward along former "farm to market" roads. Suburban areas are found around villages, wetlands and flood plains, avoiding glacial uplands and steep valleys in the southern towns. These suburban areas are surrounded by farmland, wooded areas, parks, and protected open space. Retail and commercial uses are concentrated in downtown areas, in shopping malls and office parks, and along main roadways. Industrial areas are typically located near rail lines (Syracuse-Onondaga County Planning Agency, 1998).

Land use has changed over the years in Onondaga County. Manufacturing has declined while institutional and government uses have increased. Retail uses have seen many changes in the relative strength of various malls and commercial areas. Office uses along with other service activities have increased, primarily in suburban locations. Agriculture remains a large land use; however, the number of farms and the number employees is decreasing.

POPULATION AND DEMOGRAPHICS

According to the 2000 U.S. Census, Onondaga County had a population of 458,336 people. This is in agreement with the data included in HAZUS-MH which is based on the 2000 U.S. Census data. Table 4-1 presents the population statistics for Onondaga County based on the 2000 U.S. Census data. Figure 4-4 shows the distribution of the general population density (persons per square mile) by Census block. For the purposes of this plan, data available in HAZUS-MH are used (representing 2000 data); this data is considered appropriate given the relatively small population decrease between 2000 and 2006.

DMA 2000 requires that HMPs consider socially vulnerable populations. These populations can be more susceptible to hazard events, based on a number of factors including their physical and financial ability to react or respond during a hazard and the location and construction quality of their housing. For the purposes of this study, vulnerable populations shall include (1) the elderly (persons aged 65 and over) and (2) those living in low-income households.

Source: Census 2000 (U.S. Census Bureau); HAZUS-MH MR3, 2007

Note: Pop. = population

* Individuals below poverty level (Census poverty threshold for a 3-person family unit is approximately \$15,000)

** Households with an income of less than \$20,000

It is noted that the census data for household income provided in HAZUS-MH includes two ranges (\$0-10,000 and \$10,000-\$20,000/year) that were totaled to provide the “low-income” data used in this study. This does not correspond exactly with the “poverty” thresholds established by the U.S. Census Bureau, which identifies households with an annual household income below \$15,000 per year as “low income” for this region. This difference is not believed to be significant for the purposes of this planning effort.

The 2000 U.S. Census data also identified that in 1999, 31,390 of the 181,369 households as having an annual income of less than \$15,000. The 2000 U.S. Census data indicates that in 1999 a total of 54,208 persons living in households below the poverty level (12.2-percent). Figure 4-5 shows the distribution of persons over age 65 in Onondaga County, while Figure 4-6 shows the distribution of low income persons.

GENERAL BUILDING STOCK

The 2000 U.S. Census data identifies 181,153 households in Onondaga County. The U.S. Census data identified 196,633 housing units in Onondaga County in 2000. U.S. Census defines household as all the persons who occupy a housing unit, and a housing unit as a house, an apartment, a mobile home, a group of rooms, or a single room that is occupied (or if vacant, is intended for occupancy) as separate living quarters. Therefore, you may have more than one household per housing unit. The median price of a single family home in Onondaga County was estimated at \$85,400 in 2000 (U.S. Census, 2000).

The data in HAZUS-MH estimates that there are 176,142 structures in Onondaga County, with a total building replacement value (structure and content) of greater than \$68.2 billion. Approximately 90.7-percent of the buildings and 69.5-percent of the building stock structural value are associated with residential housing. Table 4-2 presents Building Stock Statistics by Occupancy Class for Onondaga County, based on HAZUS-MH provided data.

Table 4-2. Building Stock Replacement Value by Occupancy Class

Jurisdiction	Total	Residential	Commercial	Industrial
Village of Baldwinsville	\$890,686,000	\$631,254,000	\$174,521,000	\$15,572,000

Source: HAZUS-MH MR3, 2007

Note (1): Value reflects the replacement cost for building structure and contents based on the default general building stock database provided in HAZUS-MH MR3. The general building stock valuations provided in HAZUS-MH MR3 are Replacement Cost Value from R.S. Means as of 2006.

Note (2): Generally, contents for residential structures are valued at about 50 percent of the building's value. For commercial facilities, the value of the content is generally about equal to the building's structural value. Building stock is generated by using 2000 U.S. Census data. Total reflects the total of all building classes (Residential, Commercial, Industrial, Agricultural, Religious, Government and Education).

Note (3): Town estimate does not include the total for their Village(s).

The 2000 Census data identify that the majority of housing units (61.4-percent) in Onondaga County are single-family detached units. The 2005 U.S. Census Bureau's County Business Patterns data identified 12,016 business establishments employing 216,568 people in Onondaga County. The majority (49.0-percent) of these establishments employed between one and four employees.

Figure 4-7 through Figure 4-9 show the distribution and exposure density of residential, commercial and industrial buildings in Onondaga County. Exposure density is the dollar value of structures per unit area, including building content value. Generally, contents for residential structures are valued at about 50 percent of the building's value. For commercial facilities, the value of the content is generally about equal to the building's structural value. The densities are shown in units of \$1,000 (\$K) per square mile.

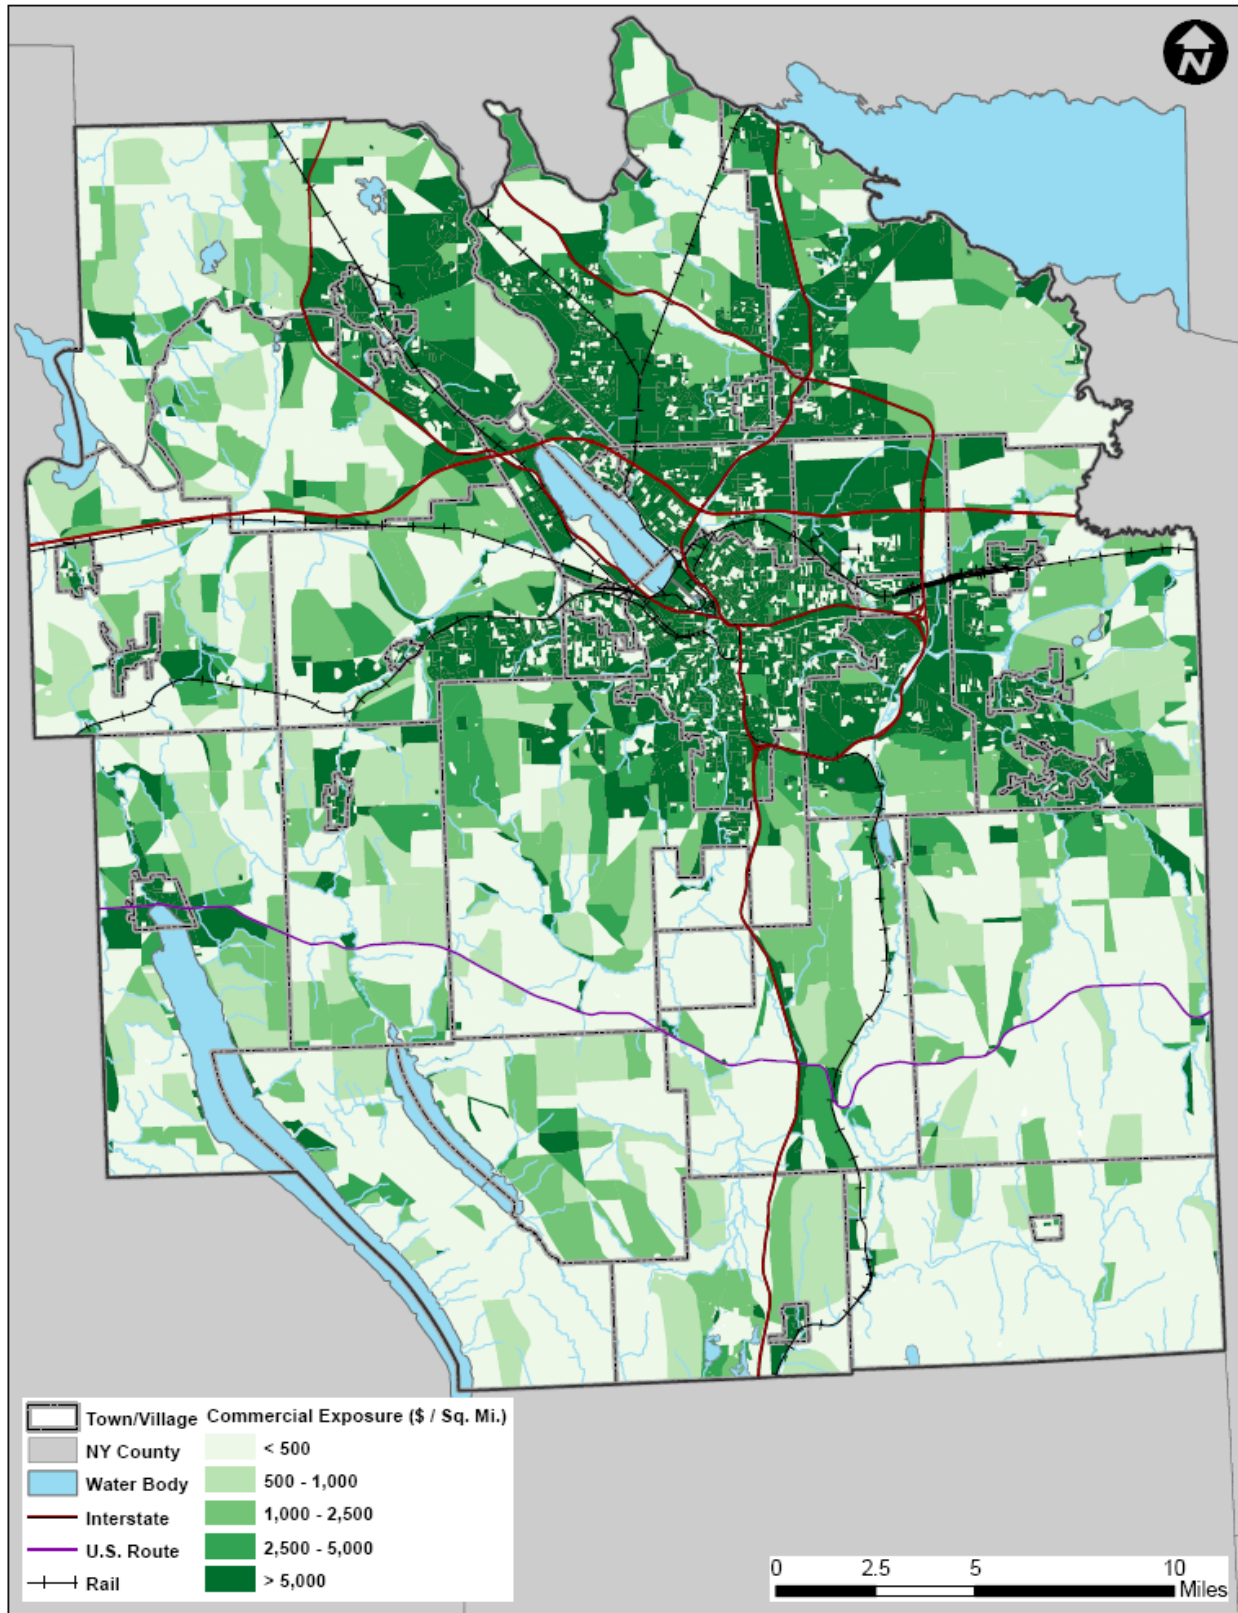

Viewing exposure distribution maps such as Figures 4-7 through 4-9 can assist communities in visualizing areas of high exposure and in evaluating aspects of the study area in relation to the specific hazard risks.

LAND USE AND POPULATION TRENDS

Land use regulatory authority is vested in New York State's towns, villages, and cities. However, many development and preservation issues transcend location political boundaries. DMA 2000 requires that communities consider land use trends, which can impact the need for, and priority of, mitigation options over time. Land use trends significantly impact exposure and vulnerability to various hazards. For example, significant development in a hazard area increases the building stock and population exposed to that hazard.

This Plan provides a general overview of population and land use and types of development occurring within the study area. An understanding of these development trends can assist in planning for further development and ensuring that appropriate mitigation, planning, and preparedness measures are in place to protect human health and community infrastructure.

Land Use Trends

Over the past several decades, land development in Onondaga County has followed a pattern of decentralization. This has led to expansion in the suburban municipalities and a mixed pattern of stability, decline and redevelopment in the City of Syracuse (Syracuse-Onondaga County Planning Agency, 1998).

Since 1970, the northern municipalities of the County have had the greatest growth. The eastern and western municipalities have had somewhat less of growth and the southern municipalities have had relatively minor population growth. This difference amongst the municipalities is most likely due to differences in land development costs, attitudes toward development, availability of infrastructure, and environmental/physical barriers. Some suburban areas have avoided growth, most likely due to landowner resistance or other areas were cheaper and easier to develop (Syracuse-Onondaga County Planning Agency, 1998).

In the City of Syracuse, a decrease in its population has led to a decline in housing. Since the 1960s, the number of City households has been declining. Between the 1980s and 1990s, there were a greater number of demolitions than new building permits. While the City has seen an overall decline in the number of households, some areas of the City have had great stability while others have grown through either new construction or redevelopment (Syracuse-Onondaga County Planning Agency, 1998).

Other types of land use in the County have seen changes as well. Manufacturing has declined, while institutional and government uses have increased. Retail land use has seen an increase, due to the numbers of various malls and commercial strips. Office and other services have seen an increase, mainly in suburban locations. Agricultural land use is still large; however, it employs fewer people on fewer farms each decade. The City of Syracuse remains the largest employment center and it is predicted to remain this way over the next twenty years (Syracuse-Onondaga County Planning Agency, 1998).

Table 4-3 and Figures 4-10 and 4-11 display the land use through Onondaga County. This data is based on information provided by the County.

Table 4-3. Land Use of Onondaga County

Agricultural Land

Agriculture is one of the industries in Onondaga County. According to the 2007 Census of Agriculture, approximately 54-percent of farm operators reported farming as their principal occupation. The market value of agricultural products sold from County farms totaled \$137.3 million, with total sales averaging \$198,515. Crop sales accounted for \$36.9 million (27-percent) of total sales and livestock sales accounted for \$100.8 million (73-percent) of total sales. The leading agricultural products sold were dairy products (63-percent), fruits, tree nuts and berries (10-percent), poultry and eggs (nine-percent), grains and dry beans (seven-percent), vegetables (six-percent), nursery and greenhouse (three-percent), and other crops (two-percent) (U.S. Department of Agriculture, 2007).

The average value of land and buildings per farm in 2007 was \$521,122. Machinery and equipment were valued at \$127,052 per farm. The total production expenses in 2007 were \$100.2 million for an average of \$144,785 per farm (New York Agricultural Statistics Service, 2007).

Onondaga County ranks 20th in the State for number of farms and 23rd for land in farms (New York Agricultural Statistics Service, 2005). According to the 2007 Census of Agriculture, Onondaga County had 150,499 acres of farms in 2007. The average size of a farm was 217 acres and the median size of a farm was 64 acres. The amount of land used for farming as decreased by 220,163 acres between 1940 and 2007. The majority of the land is used for dairy farming and to raise crops for dairy farming. Other crops include poultry and eggs, grains and dry beans, vegetables, and nursery and greenhouse. In 2007, there were 108,057 acres covered by cropland, 23,914 acres covered by woodland, 13,090 acres used for other uses, and 8,022 acres covered by pastureland (New York Agricultural Statistics Service, 2007). Table 4-4 shows the number of farms and land use in Onondaga County.

Table 4-4. Farms in Onondaga County, New York

Year	Number of Farms	Land in Farms (acres)	Total Cropland (acres)	Permanent Pasture (acres)	Total Woodland (acres)	Other Land (acres)

Economy

New York State's *Empire Zones* program was developed in an effort to encourage new business and expansion within the upstate New York region. This program has been expanded within Onondaga County. This program offers tax incentives and utility reductions to facilitate business growth in select target areas. The County's Empire Zone area continues to grow, allowing for expansion of existing commercial sites along new, targeted development locations (Syracuse-Onondaga County Planning Agency, 1998).

Through the Empire Zones, Empowerment Zones or other statewide industrial and high-tech development initiatives, the following are some of the areas the County is marketing for industrial and commercial development:

- Clay Industrial Park
- Radisson Industrial park
- Town of DeWitt
- Syracuse University Research Park
- Hancock Air Park
- Salina Power Park

Other commercial projects have taken place outside of the ones mentioned above. The Lakefront, Downtown, and University Hill areas in the City of Syracuse are in planning and development states for a variety of projects ranging from educational and research to retail, residential, and office space. A majority of the large-scale development that has occurred in the suburbs of the City is retail-based (Syracuse-Onondaga County Planning Agency, 1998). Other projects that are proposed or have been completed include:

- Lakefront Development District is a former industrial district that is continuing to go through redevelopment. This project includes retail/entertainment and mixed-use development of the Inner Harbor, and historic Franklin Square. It also includes development on additional available land within the Lakefront area.
- Downtown Syracuse/University Hill Redevelopment is a project to maintain occupancy of existing office structures, encourage new residential conversion of buildings, and create an urban core in Downtown Syracuse. Syracuse University is investing in new academic buildings. Area hospitals continue to invest with several expansion/upgrade projects.
- Town Center of Fayetteville is a project located at the former site of the Fayetteville Mall. The project consists of approximately 400,000 square feet of retail and office space on 50 acres of land outside the Village of Fayetteville.
- Clay Route 31 Corridor is a highly traveled corridor in the Town of Clay. It has experienced ten years of continued retail expansion. The corridor, mainly toward the west, has seen a steady expansion of retail activity since the construction of the Great Northern Mall.
- Cicero Route 11 Corridor is currently experiencing a rise of new retail activity, with a recent surge of new homes in the Towns of Clay and Cicero. Since 2000, two vacant malls near the Circle Drive/I-481 Interchange have been redeveloped into new retail space and a large automobile sales and service center. This redevelopment has caused an interest in the Route 11 corridor to the north, which is now an area for big-box stores and other retail uses.
- Midler Crossing is being developed by the Pioneer Companies. It is located on the east side of the City of Syracuse, where Midler Avenue meets I-690 and Erie Boulevard. The plans for this project propose a 170,000 square foot Lowe's, another small chain store, a restaurant and a credit union.

- The Cicero Road 31/South Bay Road in Cicero has been identified as a new opportunity for small-scale commercial development. This intersection has been rezoned from residential to a commercial district.
- Van Buren Action Sports Complex is a \$70 million project that will include two hotels, a water park, restaurants and retail, and various indoor and outdoor sports activities. This area is located adjacent to the New York State Thruway and Interstate 690.
- Camillus Route 5 Corridor has been developed over the past ten years with new housing, which has spurred commercial growth and redevelopment in this area. A variety of big-box stores and small retail and office spaces are being developed in this area. The Camillus Mall and Fairmount Fair shopping center have both gone through redevelopment and caused activity throughout the Town of Camillus.
- Syracuse 481 Interchange was identified as an opportunity in the City of Syracuse's Comprehensive Plan. It was stated that this area has the potential to support new office, retail and industrial growth.
- A 205,000 square foot Wal-Mart superstore is proposed for the intersection of Route 57 and the Liverpool By-Pass. The current property is vacant.
- Tessa Plastics in Elbridge expanded its building by 100,000 square feet, which added approximately 200 jobs to its facility. A recent waterline extension has created new development along the Route 5 Corridor. This development includes a golf course and the Byrne Dairy/Gas Station.
- Due to new housing being developed in the Village of Manlius, Route 92 in Manlius is being developed with a hardware store, strip mall and gas station.
- The area around Hinsdale Road is being developed with mixed use spaces. It is anticipated that this area will be a mixture of rail, office, theaters, and housing (Syracuse-Onondaga County Planning Agency, 1998).

The following sections present an overview of the County economy including: service sector, manufacturing, retail trade and employment.

Service Sector

In 1990, the service sector employed the most workers. This continued through the 1990s. Of the 114 occupations most in demand in the Syracuse Labor Area, over 60-percent are from the service sector. This includes 30 professional and technical occupations, 23 clerical occupations, and 17 other service occupations. Nationally, the fastest growing occupations in the service sector are expected to be in the computer and health fields. In Onondaga County, these fields are expected to grow as well, due to the City of Syracuse's role as a regional hospital and health service center. Other important service sector fields in the County include education, regional government services and cultural activities (Syracuse-Onondaga County Planning Agency, 1998). In August 2005, employment in the health and educational occupations was at a record level (51,300 employees) (Syracuse Metropolitan Transportation Council, 2007).

Manufacturing

Employment in manufacturing has declined from 1966. In 1990, manufacturing was the third largest employer in Onondaga County and by 1996 it was the fourth largest employer. The decline in manufacturing has been most likely due to corporate restructuring, changes in manufacturing processes, increase in automation, foreign competition, and changes in market requirements. Those manufacturing businesses that have been successful adjusted to these changes, but most likely resulted in decreasing their

number of employees. Those that have been less successful have closed, reduced their size, or been bought out by competitors (Syracuse-Onondaga County Planning Agency, 1998).

Retail Trade

Retail trade is the second largest employer in Onondaga County. Retail growth in the 1980s was due to the construction of several new shopping malls and the expansion of existing malls, as well as new, smaller retail centers. In the 1990s, the retail sector was impacted by the decline of several older malls, the buying-out of retail chains, the renovation and expansion of grocery chains, and the creation of discount strip malls throughout the area. As a result of these changes, along with a steady turnover of stores in local malls and shopping centers, retail trade employment has decreased between 1990 and 1996 (Syracuse-Onondaga County Planning Agency, 1998).

Employment

Central and upstate New York employment has remained relatively stable over the past several years. Many of the region's largest employers are located within Onondaga County, which include Syracuse University, National Grid, State University of New York Upstate Medical University, New Process Gear, Bristol Myers Squibb, Verizon Communications, Lockheed Martin, Welch Allyn, Blue Cross/Blue Shield, and Anheuser-Busch. Many high-profile manufacturing jobs in central New York State have seen a gradual decline; however, Onondaga County is experiencing continued job growth. According to the New York State Department of Labor, "Onondaga County has been recognized as one of the most diversified metropolitan economies in the State". The unemployment rates for the County and central New York State are lower than the State's average (Syracuse Metropolitan Transportation Council, 2007).

The business sectors with the most number of employees are health, manufacturing, and retail/trade. The City of Syracuse is the municipality with the most number of employees in the health industry (21,000), which is due to the location of several hospitals and medical office buildings. The City also has the majority of retail and trade employees, followed by the Towns of DeWitt and Clay. The Town of DeWitt has the highest number of employees in the manufacturing field (Syracuse Metropolitan Transportation Council, 2007).

The second largest employer sector is education, financial and real estate, and government. The City of Syracuse has the largest number of employees in each of these sectors. The sectors with the least number of employees are mining and agriculture. The City of Syracuse and the Towns of Manlius and Spafford report employees working in the mining industry. The Towns of DeWitt, Manlius, Onondaga and the City of Syracuse show the greatest number of employees in the agriculture sector (around 100 in each municipality) (Syracuse Metropolitan Transportation Council, 2007).

Population Trends

This section discusses population trends to use as a basis for estimating future changes that could result from the seasonal character of the population and significantly change the character of the area. Population trends can provide a basis for making decisions on the type of mitigation approaches to consider and the locations in which these approaches should be applied. This information can also be used to support planning decisions regarding future development in vulnerable areas.

Onondaga County is the most populated county in central New York State, with the City of Syracuse as its traditional city core, surrounded by suburban and rural municipalities. The most populated areas of the County are the City of Syracuse and surrounding towns to the north and east (Syracuse Metropolitan Transportation Council, 2007).

The U.S. Census Bureau estimates Onondaga County's 2007 population to be 454,010 persons, which is a 0.9 percent decrease from the 2000 Census population of 458,336. From 1800 to 2007, the County has experienced a fluctuation in its population. The largest increase was seen between the years 1950 to 1960, when the County experienced a 23.8 percent (81,309 persons) population increase. The largest decrease was seen between the years 1990 and 2000, when the County experienced a 2.3 percent (-10,637 persons) population decrease. The smallest increase was seen between the years 1930 and 1940, when Onondaga County only experienced a 1.2 percent (3,502 persons) percent increase. The County experienced an overall population decrease from 1990 to 2007, totaling 3.2 percent (14,963 persons) (U.S. Census Bureau, 2007). Table 4-5 displays the population and population differences from 1800 to 2007 in Onondaga County. Figure 4-12 depicts the past, current, and projected population statistics/trends for the County.

Table 4-5. Onondaga County Population Trends, 1800 to 2007

Year	Population	Change in Population	Percent (%) Population Change
1800	7,406	--	--
1810	25,987	18,581	250.9%

1840	67,911	8,938	15.2%
1850	85,890	17,979	26.5%
1860	90,686	4,796	5.60%
1870	104,183	13,497	14.9%
1880	117,893	13,710	13.2%
1890	146,247	28,354	24.1%
1900	168,735	22,488	15.4%
1910	200,298	31,563	18.7%
1920	241,465	41,167	20.6%
1930	291,606	50,141	20.8%
1940	295,108	3,502	1.20%
1950	341,719	46,611	15.8%
1960	423,028	81,309	23.8%
1970	472,746	49,718	11.8%
1980	463,920	-8,826	-1.90%
1990	468,973	5,053	1.10%
2000	458,336	-10,637	-2.30%
2006	456,777	-1,559	-0.30%
2007	454,010	-2,767	-0.60%

Source: U.S. Census Bureau, 1995 and 2007; University of Virginia, 2004

Note: Change in population and percent in population change was calculated from available data

Figure 4-12. Onondaga County Population Trends, 1800 to 2007

Source: U.S. Census Bureau, 1995 and 2007; University of Virginia, 2004

Population shifts are occurring within Onondaga County. Most of this shift is seen from the City of Syracuse to suburban towns. The City of Syracuse saw a peak in its population in 1950. At that time, the City’s population made up 65-percent of the County’s total population. In 2000, the City’s population only made up 32-percent (Syracuse Metropolitan Transportation Council, 2007). Figure 4-13 illustrates the growing suburban population and decline of the City’s population.

Figure 4-13. Onondaga County Population Trends, 1950-2000

Source: Syracuse Metropolitan Transportation Council, 2007

The U.S. Census Bureau estimates that between 2000 and 2004, the City of Syracuse lost approximately 2.85-percent of its population, while the suburbs of Onondaga County showed an overall increase of 1.84-percent. It has been projected that a few suburban towns will increase in population by four to six-percent. These towns include Cicero, DeWitt, Lysander, and Pompey. The Towns of Geddes, Salina, and Van Buren have all been projected to show a decrease in their population (Syracuse Metropolitan Transportation Council, 2007).

FUTURE GROWTH AND DEVELOPMENT

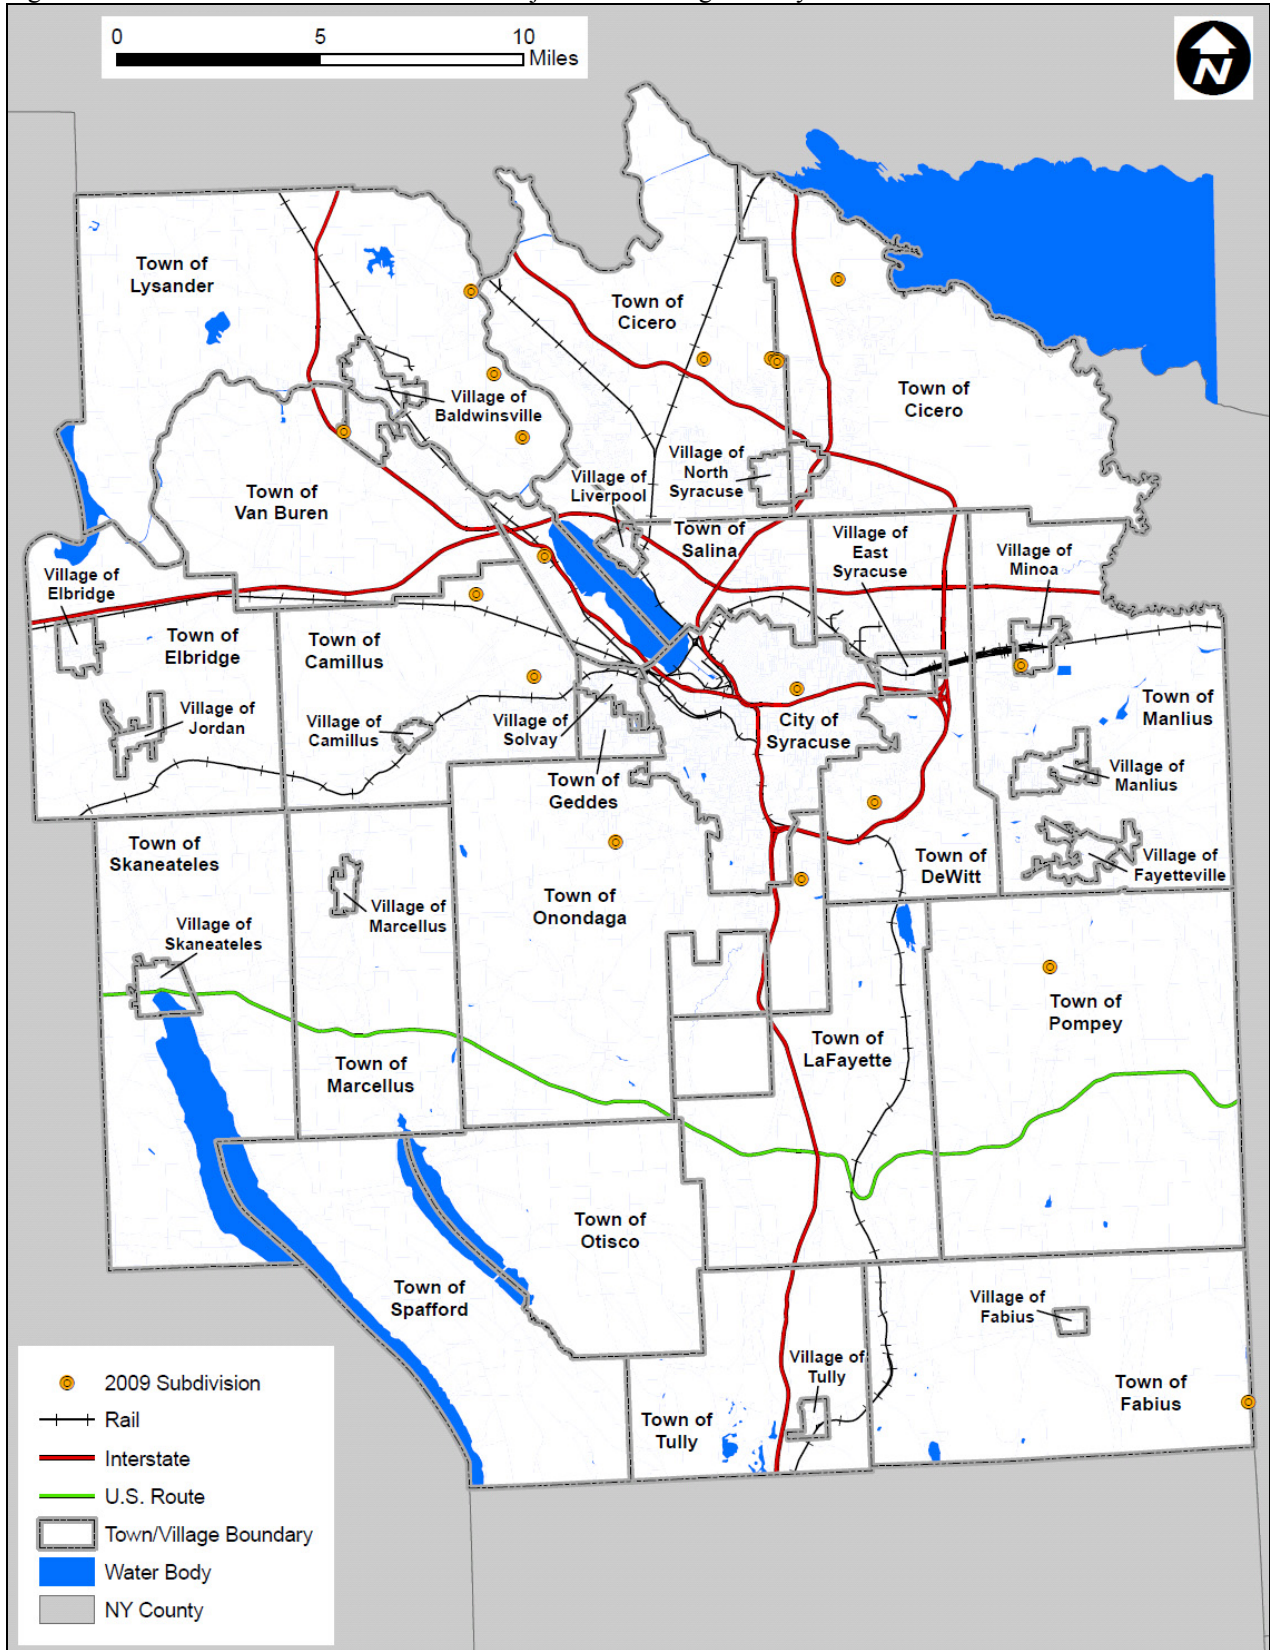

The Syracuse-Onondaga County Planning Agency identified major subdivisions within the County that are either in progress of completion or are in the process of being approved. These projects only include residential development, subdivisions. For future updates to this Plan, a more extensive evaluation of possible and existing new development within the County should be done. Table 4-6 lists the projects identified by SOCPA and Figure 4-14 illustrates the location of these projects.

CRITICAL FACILITIES

A comprehensive inventory of critical facilities in Onondaga County was developed from various sources including HAZUS-MH provided data, Syracuse-Onondaga County Planning Agency, and input from the Steering and Planning Committees. The inventory of critical facilities presented in this section represents the current state of this effort at the time of publication of the draft HMP and used for the risk assessment in Section 5.

Essential Facilities

This section provides information on emergency facilities, hospital and medical facilities, shelters, schools, and senior care and living facilities.

Emergency Facilities

For the purposes of this Plan, emergency facilities include police, fire and emergency medical services (EMS). Tables 4-7 and 4-8 provide an inventory of police stations, fire stations and EMS facilities in Onondaga County. Figure 4-15 displays the location of these facilities based on the HAZUS-MH inventory data and input from the Planning Committee.

Critical Facilities are those facilities considered critical to the health and welfare of the population and that are especially important following a hazard. As defined for this HMP, critical facilities include essential facilities, transportation systems, lifeline utility systems, high-potential loss facilities, and hazardous material facilities.

Essential facilities are a subset of critical facilities that include those facilities that are important to ensure a full recovery following the occurrence of a hazard event. For the County risk assessment, this category was defined to include police, fire, EMS, schools/colleges, shelters, senior facilities, and medical facilities.

Transportation Systems

This section presents available inventory data for roadways, airports, railways and other transportation systems for Onondaga County. Figure 4-17 shows regional transportation lifelines serving Onondaga County.

Highway, Roadways and Associated Systems

Many major New York Highways pass through Onondaga County, all seemingly crossing the City of Syracuse in the center at one point. Interstate 81 travels across the County in a north-south direction. Interstate 90 travels across the County in a perpendicular, east-west direction; intersecting with Interstate 81 in the Town of Salina. Interstates 690 and 481 connect to each other as well as the other two Interstates within the County, both traveling in a general northern direction. U.S. Route 23 passes in an east-west direction in the Southern half of the County.

Airports and Heliports

While there are several landing areas, and private airport locations within the County, Hancock International Airport in DeWitt provides the County's only access to commercial airlines. Table 4-12 below lists all airport runways and facilities within Onondaga County.

Table 4-12. Airports in Onondaga County

T = Town

Railway

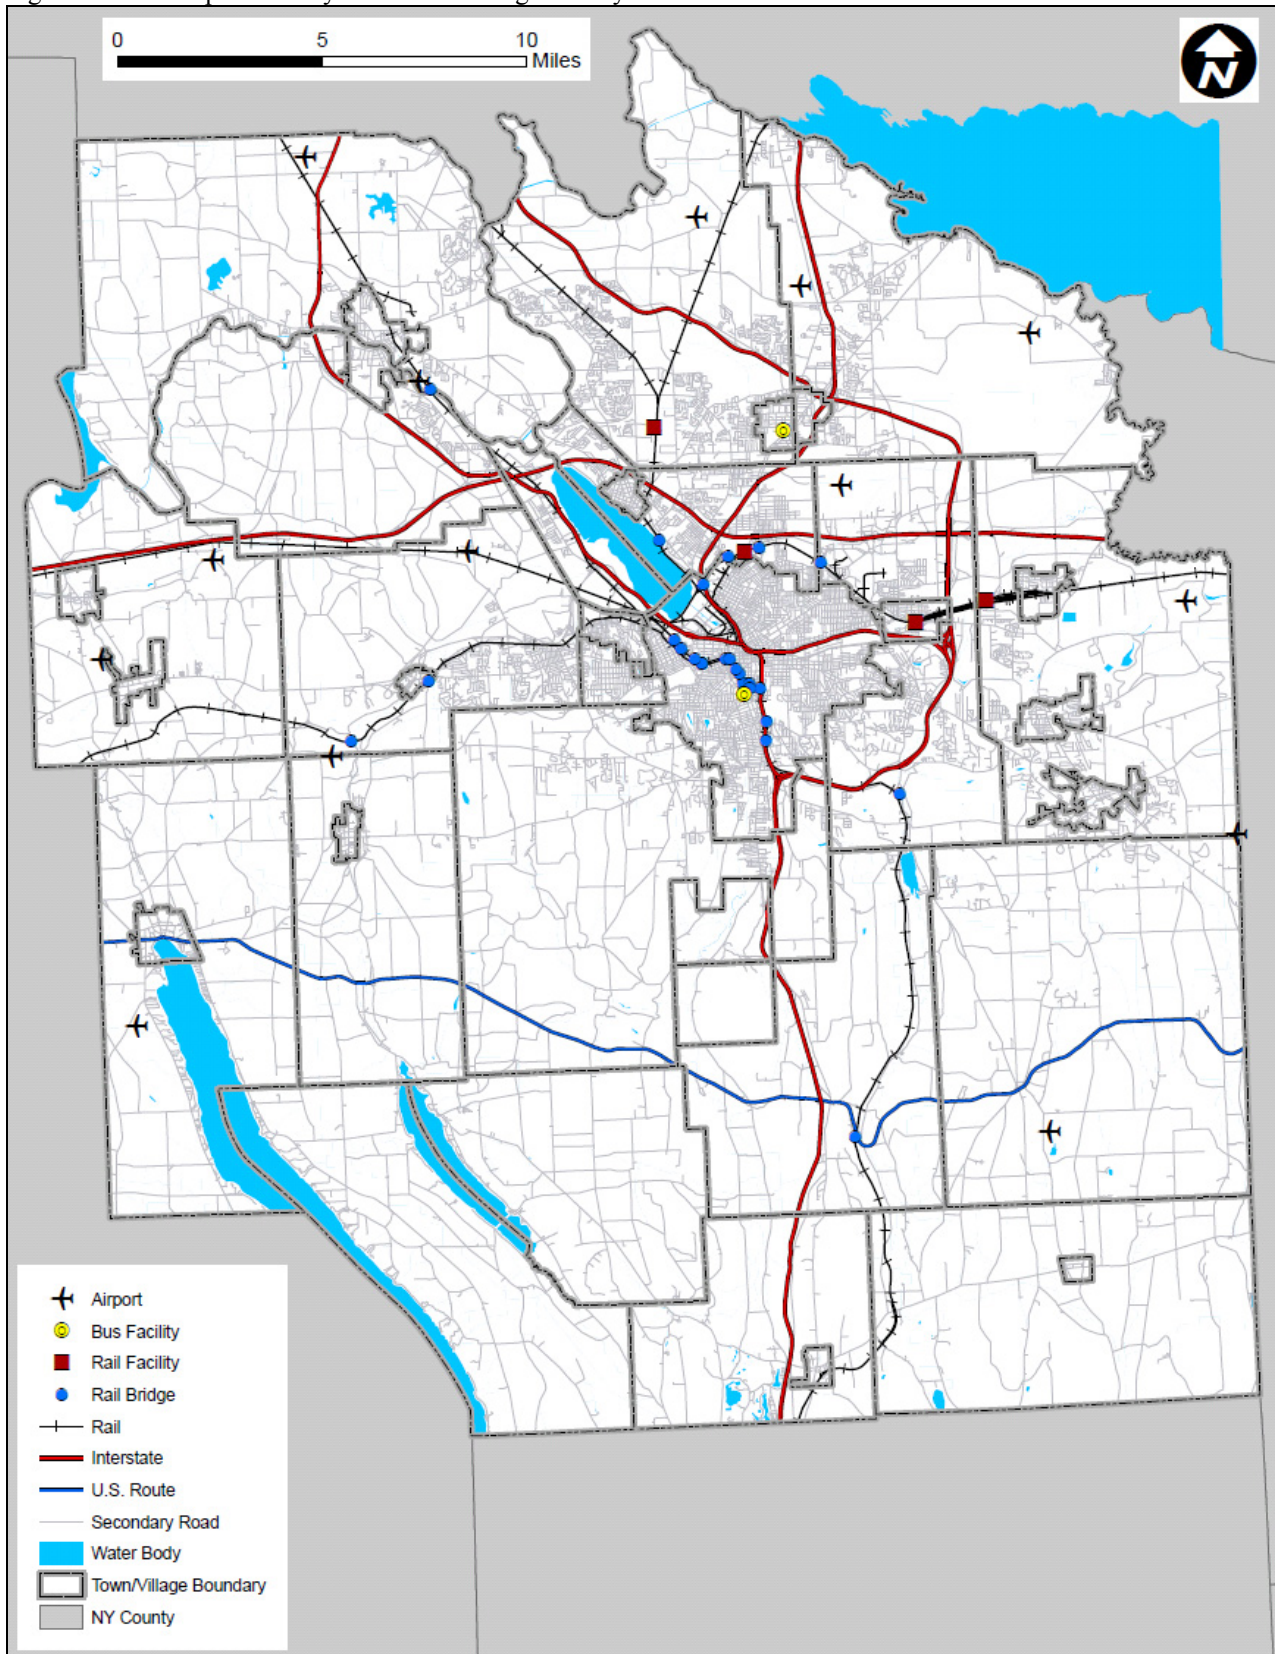

The railways that run through Onondaga County are used to carry both passengers as well as freight. Amtrak provides the passenger rail services with connections to major rail locations on the New York Susquehanna & Western Railway.

Public Transportation

The main public transportation system within Onondaga County is the Centro Bus System. The Centro busses operate in Onondaga, Oswego and Cortland Counties in central New York. Onondaga County is

the largest contributor to Centro routes; about 28,000 people ride the Centro lines. It costs \$1.00 to ride on a Centro Bus line that is within the same zone; a .25 cent fee applies when traveling outside of that zone. Busses generally operate between 5:00am and 12:00am, seven days a week.

Source: Syracuse-Onondaga County Planning Agency; HAZUS MH MR3(2007); Planning Committee

Lifeline Utility Systems

This section presents potable water, wastewater, and energy resource utility system data. Due to heightened security concerns, local utility lifeline data sufficient to complete the analysis have only partially been obtained. Utility data are included in HAZUS-MH but are not sufficient to support detailed analyses for this County.

Potable Water Supply

The Onondaga County Water Authority (OCWA) is responsible for the distribution of potable water to a majority of County residents. According to their website, OCWA operates 33 pumping facilities and 40 storage facilities throughout the County. The Towns of Skaneateles, Otisco, Tully and Fabius (and their incorporated Villages) are supplied by Skaneateles Lake (OCWA, 2009).

Wastewater Facilities

The Steering and Planning Committees as well as HAZUS-MH identified twenty (20) wastewater treatment facilities in Onondaga County. Additionally, 129 pump stations were identified. An inventory of these facilities and pump stations are listed below in Tables 4-13 and 4-14, and their distribution in the County is displayed in Figure 4-18.

Oil Refineries

HAZUS-MH identified the existence of one (1) oil refinery in Onondaga County; Agway Energy Products in the Town of DeWitt. For the purposes of analysis, the facility was given the HAZUS-MH default replacement cost value of \$118,000. The location of this facility is displayed in Figure 4-18 below.

Energy Resources

PSE&G is the primary electric and gas utility company in Onondaga County. There are oil (Sun Pipe Line Company and Tidewater Oil), natural gas (Algonquin Gas Transmission Company and Texas Eastern Transmission Company), electric and communication (AT&T) lines that run throughout the County. All available utilities were included as part of the risk assessment for this HMP.

HAZUS-MH and the Planning Committee provided the location of six (6) electric power facilities within the County. All electric power facilities and substations are inventoried below in Table 4-15 and are displayed in Figure 4-18.

Table 4-15. Electric Facilities within Onondaga County

Name	Location (Municipality)	Cost

Communication Resources

A majority of Onondaga County is serviced by Time Warner for telephone service. HAZUS-MH MR3 and the Planning Committee identified 33 broadcasting facilities within the County; all are inventoried in Table 4-16 below.

High-Potential Loss Facilities

High-potential loss facilities include dams, levees, nuclear power plants, military installations and hazardous materials (HAZMAT) facilities. No nuclear power plants or military installations were identified in the County. Dams, levees and HAZMAT facilities are discussed below.

Dams

According to the National Inventory of Dams (NID), input from the Planning Committee, and data received from the New York State Department of Environmental Conservation, there are 36 dams in Onondaga County. A dam is included in the NID if: 1) it is a “high” or “significant” hazard potential class dam or, 2) it is a “low” hazard potential class dam that exceeds 25 feet in height and 15 acre-feet storage or, 3) it is a “low” hazard potential class dam that exceeds 50 acre-feet storage and 6 feet height. Of the 36 dams inventoried, there are 11 dams classified as high, 17 classified as significant, 6 classified as low and 2 with an unknown classification. The dam hazard classification is unknown for dams provided by the Planning Committee that are not on the NID. Table 4-17 defines the hazard potential classification, as accepted by the NID Interagency Committee on Dam Safety. Table 4-18 lists the dams in Onondaga County and Figure 4-19 shows the locations of these dams.

Table 4-17. Dam Hazard Potential Classifications

Hazard Potential Classification	Loss of Human Life	Economic, Environmental, and Lifeline Losses
Low	None expected	Low and generally limited to owner
Significant	None expected	Yes
High	Probable. One or more expected	Yes (but not necessary for this classification)

HAZMAT Facilities

The U.S. Environmental Protection Agency (EPA) Toxics Release Inventory (TRI) database identifies thirty nine (39) TRI facilities in Onondaga County (2005). TRI facilities are those required to report on chemical storage and use based on particular volumes of specified chemicals stored and used. Table 4-19 TRI facilities, their chemicals reported as well as other HAZMAT facilities identified by the Planning Committee.

Other Facilities

The user-defined facilities category includes all assets that the County and participating municipalities deemed critical to include in the inventory and that do not fit within a pre-defined HAZUS-MH facility category. These facilities include municipal halls and mobile home areas. Table 4-20 below lists all user-defined facilities for Onondaga County.

Table 4-20. Other Facilities in Onondaga County

Name	Location (Municipality)	Replacement Value*	Building Type*	Backup Power
Baldwinsville Village Hall	Baldwinsville (V)	\$1,000,000	Concrete	TBD
